Dispenser Placement in the ER

Always in view: Well-available hand disinfectants improve patient protection at the Point-of-Care.

3 tips for dispenser placement

Focus on the perspective of the staff:

Dispensers should always be visible during a treatment [2].

One arm's length distance:

Personnel should not have to move to reach the dispenser during the activity.

Ensure functionality:

Regular control of the functionality as well as of the expiration date and the filling level of the hand disinfectant [3].
