MANUSHIELD® CLEANER

The convinient liquid cleaner for instruments and endoscopes

- pH-neutral and gentle to materials
- good cleaning strength and easy to integrate
- fragrance-free

MANUSHIELD CLEANER is an efficient liquid concentrate optimal for reprocessing conventional surgical and dental/medical instruments, but also rigid and flexible endoscopes. Furthermore, due to its enzyme-free formulation, it is also ideally suited for ophthalmology.

Here, the MANUSHIELD CLEANER can be used in an immersion bath and an ultrasonic bath, even with all water hardnesses. Additionally its fragrance- and colour-free formulation means it has low allergenic potential and is thus very user-friendly. The MANUSHIELD CLEANER is compatible with the disinfectants of the Dr. Schumacher product portfolio for instruments.
