

REDUCED-PLASTIC BOTTLES

Driven by conviction –
sustainable innovations

SMARTER. **LIGHTER.** GREENER.

**11g less plastic per
1,000 ml bottle**

Light on plastic. Heavy on impact. Our new 1 liter lightweight bottle.

Less plastic, same performance – now in 1 Liter.

For decades, Dr. Schumacher has stood for high-quality hygiene products and a strong commitment to the responsible use of resources, energy, and the environment. As a company, we are consistently focused on developing product solutions that conserve resources and protect our planet.

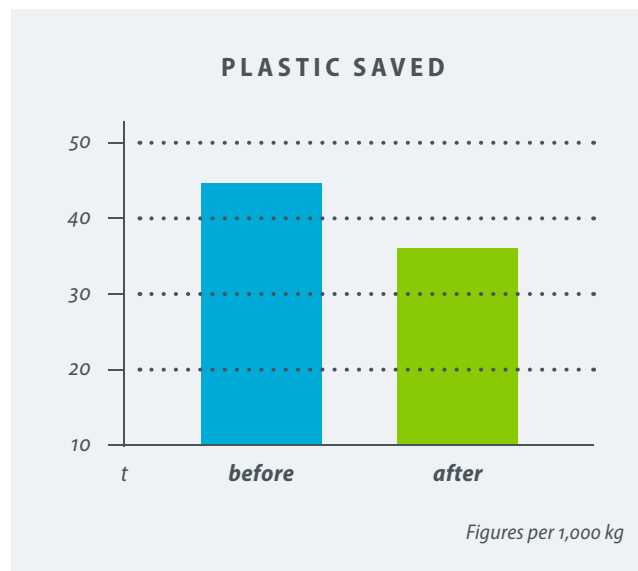

Sustainable and future-focused

We are currently transitioning our 1 liter bottles for wash lotions and hand disinfectants to a reduced-plastic version. In doing so, we are successfully continuing the evolution of our sustainable product innovations.

Investing in a better future.

By reducing plastic in our packaging, we make a meaningful contribution to conserving natural resources while also lowering CO₂ emissions – both in production and during transport. After use, the disposal processes is simpler, and our environmental footprint is significantly reduced.

This step underscores our commitment to aligning environmental responsibility with product safety – for a responsible future in health-care. A future that benefits not only people, but also the planet.

**18 % LIGHTER
1,000 ML BOTTLE**
